NOTES:
1. "T" Panels are to be placed at a maximum of 10 panel segment intervals and at transitions to permanent concrete barrier. "R" panels provide for quick and easy placement and removal by lateral movement of panel (N0 Notched Ends). "N" panels have concrete notches at each end of the panel. "T" panels have a concrete notch at one end of the panel and a vertical face at the other end of the panel. Notched and connections plus overlapping connection plates require longitudinal movement of the panels during placement or removal. If portable concrete barrier (Type 60K) is to be removed after installation, "R" panels are to be removed first to facilitate removal of the remaining panels.
2. Reinforcement and dimension details for "T" and "R" panels are similar to the "N" panel details shown on Standard Plan A63a.
3. Modify end of permanent concrete barrier with the installation of connection plates for connection pin and cover plates. Remove 2 of existing Type 60 permanent concrete barrier to install connection plates for "R" Panel connection. Where the transition to existing barrier requires a height transition, remove existing barrier to end of the height transition.
4. Dimension to bottom of the 5" x 3" x … plate.
5. For additional details of connection plate configurations, see Sections C-C and D-D of Standard Plan A63a.
