DOUBLE THRIE BEAM BARRIER CONNECTION TO BRIDGE RAILING WITHOUT SIDEWALK

NOTES:
1. For additional details of Transition Railing (Type DTB), see Standard Plan A78K. Transition Railing (Type DTB) transitions the standard 12 gauge double thrie beam barrier to a heavier gauge double thrie beam railing section then to a heavier gauge nested double thrie beam barrier section which then is connected to the concrete bridge railing.
2. For typical use of Connection Detail 1A, see Type 25A Connection Layout on Standard Plan A78H.
3. Where the height of the bridge railing exceeds the height of the thrie beam railing by more than 1" at Connection Detail 1A, taper the top of the end of the bridge railing at 4:1 to match the top elevation of the thrie beam railing.
4. For details of End Cap (Type TC), see Standard Plan A78C1.
5. See Standard Plan A78K for additional details regarding depth dimension for straight metal box spacer.
6. Direction of adjacent traffic indicated by .
