BOX GIRDER INSTALLATION

PIPE INSTALLATION AT HINGE
Same for hanger type installation

INSTALLATION FOR OTHER STRUCTURE TYPES

NOTES:
1. Extend pipe 5'-0" beyond the edge of shoulder or as shown on bridge plans. Terminate in a pull box clamped at the pipe support located halfway between pipe hangers or supports.
2. Water supply line shall be installed parallel to bridge soffit or deck.
3. For concrete pipe support, pipe shall be tightly clamped at the pipe support located halfway between hose assemblies. At all other supports, pipe clamp shall be shimmed with steel washer plate to provide 1/2" clearance between pipe and clamp.
4. Maximum spacing between pipe hangers or supports shall be 10'-0" unless otherwise detailed on the plans.
5. Install air release valve using threaded tee or pipe saddle.
6. Openings through diaphragm and bent caps shall be 6" diameter unless otherwise detailed on the plans.
7. For details of pipe hanger and concrete pipe support see Standard Plan B14-5.
