Holes excavation in the slope to construct the buried post end anchor shall be backfilled with selected earth, placed in layers approximately 1'-0" thick. Each layer shall be moistened and thoroughly compacted.

For typical use of this type of end anchor with MGS see the A77P, A77Q and A77R Series of the Standard Plans.

For typical use of this type of end anchor with MGS see the A77P, A77Q and A77R Series of the Standard Plans.

The buried post end anchor shall only be constructed at those locations where the slope perpendicular to the roadway is non-traversable.

NOTES:

1. For typical use of this type of end anchor with MGS see the A77P, A77Q and A77R Series of the Standard Plans.

2. Holes excavation in the slope to construct the buried post end anchor shall be backfilled with selected earth, placed in layers approximately 1'-0" thick. Each layer shall be moistened and thoroughly compacted.

3. The buried post end anchor shall only be constructed at those locations where the slope perpendicular to the roadway is non-traversable.
